Question:

Who is the client and who is the server?

Answer:

By definition:

- **PC1 is the client** because it is **requesting a service**.
- **PC2 is the server** because it is **providing the service** to PC1.

Important Note:

The same device can act as:

- A **client** in one situation, and
- A **server** in another situation,

depending on whether it is **requesting** or **providing** a service.
